SECRET

-2-

- 6. The mechanical department is in a building 120 by 25 by 20 m. It has six 20-too cranes. Spare parts and precision machinery are produced. There are about 500 workers in three shifts.
- 7. The foundry is in a building 120 by 30°, with three large smokestacks. The building is of concrete and brick construction. There are railroad tracks through the building and 14 ovens in addition to six Italian electric ovens. It also has six 20-ton cranes.
- 8. There is a hard-burned brick factory of 11 one-story brick buildings, each 75 by 20 m. Finished bricks are stored in a building near the foundry. This 1 is 80 by 40 m.
- 9. The factory's power storton is 150 by 50 m and hims been working for several month...
 It produced sufficient current for both factory and town.
- 10. The next planned operation is the completion of the coke works. The coke works is in a building 200 by 300 m, made of prefabricated parts. It holds the largest overhead crane in Hungary, supplied by the Dimdvag factory.
- 11. It is expected that the Martin department will also be in production soon. It differs from others of the same kind in being planned for complete air conditioning. There are four Martin ovens of 125 ton capacity in the main department. The ovens will not be loaded by crane but by movable loading machines.
- 12. Near this building stands the casting plant with a cooling section and the stripping shop with a drawing-crane of 175 tons capacity.
- 13. At one side of the stripping snop is a storehouse for steel billets with two automatic cranes, at the other the gas purification station and the building of the mixing ovens. Near this is the dam in the local stream, crossed by a railroad bridge on concrete piles.
- 14. Near this bridge is the shop for burning chalk and dolomites. Still under construction are the rolling mill, the tube factory, the copper rolling works, the copper plate rolling shop, the boiler shop, the steam hammer shop, and the machine shop.
